Our Holle promise of quality
A balanced and age-appropriate diet is very important to children, and we have done our best to use ingredients that are beneficial to their health. Our products only contain ingredients that are beneficial to the children’s well-being. For a future worth living – from the very beginning.

Holle Organic Infant Goats Milk Follow-on Formula 2 is made from high quality organic goat milk from EU. This EU organic goats milk guarantees strict adherence to the legal requirements for organic farming and careful processing of all raw materials. This is monitored by the respective eco inspection body. Vitamins and minerals are added according to legal requirements.

Follow-on Milk

Recycling

Recommended usage

Suitable after 6 months of age until the end of the third year of life as part of a mixed diet of bottle feeds and weaning.

Usage

Suitable after 6 months of age until the end of the third year of life as part of a mixed diet of bottle feeds and weaning.

To be used after breastfeeding, after using Holle Organic Infant Goat Milk Formula 1 or instead of a different follow-on milk.

Holle Organic Infant Goat Milk Follow-on Formula 2 can be used to prepare Holle organic baby formula.

The Holle Organic Infant Goat Milk Follow-on Formula 2 is a follow-on milk made using organic goat’s milk. The goats are cared for in accordance with organic farming regulations (EU organic law).

Important Notice

A mother’s milk is the most natural and beneficial nourishment for a baby – including all nutrients and vitamins. Before you decide to use this product, consult your doctor or health worker. The Holle Organic Infant Goats Milk Follow-on Formula 2 is specially formulated for the dietary needs of infants after 6 months and should be given as part of a mixed diet. Do not use the milk as a substitute for breast milk. The decision to start weaning your baby before 6 months of age should be made with the help and advice of independent health professionals and depends on your baby’s individual development and needs.

To prevent possible damage to teeth, do not give the bottle to your baby as a comforter. Pay special attention to your baby’s dental hygiene once his or her first tooth has come through.

Preparation

Boil the water as indicated in the table and allow to cool to approx. 50°C. Pour approx. half of the water into the bottle. Prepare each bottle individually. Pour into cooled boiled water.

Fill the measuring spoon and level with a knife. Only the enclosed measuring scoop should be used. Add the quantity of milk powder indicated in the table to the water.

Shake thoroughly. Add the rest of the water and shake again. Allow to cool to approx. 37°C before feeding. If the bottle of made up formula is to be stored prior to use, it must be refrigerated and used within 24 hours. Rinse both in the bottle or cup after a feed should be discarded.

Preparation Guidelines

For your baby’s continuing health please follow all instructions exactly.

Prepare bottles and teats as directed. Only the provided measuring spoon.

Keep to the recommended dosage. The correct dosage of ingredients will ensure that your baby always receives the nutrients it needs. Do not change proportions of powder except on medical advice. Incorrect preparation or storage can make your baby very ill.

Avoid of overheating, do not heat your baby’s milk in the microwave. Do not use leftovers.
